

# **BRITE-LITE**

LIGHTING AND ELECTRICAL DISTRIBUTORS

## **LAMP and BALLAST RECYCLING PROGRAM**

Fluorescent lamps and ballasts contain mercury, lead, metals and other materials which have a harmful effect on the environment if not recycled.

Mercury is a highly toxic heavy metal that, when put into landfills, seeps into the groundwater and contaminates rivers, streams, lakes and over time, our drinking water.

A **Recycling Program** is the way we can contribute to the reduction of the mercury released into the environment.

Brite-Lite's mission is to assist you with your decision to recycle and help reduce the mercury contamination in our Province.

## **HOW RECYCLING WITH BRITE-LITE WORKS:**

### **FLUORESCENTS - Linear and Compacts**

- 1) Place all your spent **non broken** fluorescent tubes into their manufactures boxes
- 2) Once the box is full, seal the box completely for shipping
- 3) Label all boxes and complete the Recycle Form detailing the quantities and products
- 4) Contact us to arrange for removal of your boxes from your loading dock
- 5) Shipping and handling costs will be calculated after shipping

### **BALLASTS - Fluorescent and H.I.D**

- 1) Place all your spent **NON PCB Ballasts** into boxes
- 2) Once the box is full, seal the box completely for shipping
- 3) Label all boxes and complete the Recycle Form detailing the quantities and products
- 4) Contact us to arrange for removal of your boxes from your loading dock
- 5) Shipping and handling costs will be calculated after shipping

**Join us today to help reduce the number of fluorescent lamps and ballasts ending up in our landfills!**
