## What Causes Light Pollution?

Light pollution is a side effect of industrial civilization.

Its sources include building exterior and interior lighting, advertising, commercial properties, offices, factories, streetlights, and illuminated sporting venues.

DarkSky

# LET'S BEAT LIGHT POLLUTION TOGETHER!

DarkSky International restores the nighttime environment and protects communities from the harmful effects of light pollution through outreach, advocacy, and conservation.

---

## LIGHT CAN BE A POLLUTANT

Most of us are familiar with air pollution, water pollution, and land pollution, but did you know that light can also be a pollutant?

Components of light pollution include:

**Glare** — excessive brightness that causes visual discomfort

**Sky glow** — brightening of the night sky over inhabited areas

**Light trespass** — light falling where it is not intended or needed

**Clutter** — bright, confusing, and excessive groupings of light sources

## WHAT IS LIGHT POLLUTION?

Light pollution is the human-made alteration of outdoor light levels from those occurring naturally.

## WHAT CAN BE DONE ABOUT LIGHT POLLUTION?

Following responsible lighting practices and choosing DarkSky approved fixtures are just some of the ways light pollution can be solved. You can get involved too!

Need help? Email [info@csc-led.com](mailto:info@csc-led.com) and our team will help you put a responsible lighting plan into action!
