Tariff Notification

Dear Brite-Lite Customers,

The current situation impacting global trade where 10-25% in potential tariffs have been introduced and proposed by the United States include lighting products and components imported from China. These new tariffs will impact costs on many products in the lighting industry and will create price increases in the market.

We will communicate any updates or changes should there be a any further developments and we will continue to analyze the specific cost impact to our products in further efforts to delay and mitigate the impact on prices to Brite-Lite Customers.

We recommend that you review your inventory and make the appropriate adjustments to stock levels on key price sensitive products to help “cushion” the impact of future, higher prices. We share in the concerns of all suppliers and distributors across the lighting industry regarding the financial impact of these tariffs and are working closely with our industry advocates in hopes better news in the coming weeks.

Please contact your local Brite-Lite account manager for more information
